

Reduce waste.

Increase value.

Help your business get Lean.

The PMI Lean Essentials Series

The Lean Essentials series provides accessible Lean training for use across industries and sectors, helping you to create effective and efficient lean processes.

What's covered?

Through a series of ten engaging online modules, users are introduced to the PMI Improvement Cycle - a structured methodology to equip your organisation with the tools required to implement Lean improvement. Theoretical concepts are brought to life through Presto Pizza, the fictional company from our 'soap opera' style case study. You also get the chance to try Lean based improvement for yourself in the "5S" challenge; our interactive 3D game.

Who's it for?

- **Managers to enable them to drive Lean process improvement**
- **Project team members to aid their understanding and involvement in the whole Lean process**
- **The standalone learner, who wants to know more about Lean and process improvement**

How does it work?

Our e-Learning content is available over the web using our online learning management system, or it can be installed on your own learning management system if you have one in place. The programme can be fully tailored to your specific requirements and we provide all the support you need to ensure your organisation gets maximum benefit from the training.

Tailor your learning

As well as being a standalone online course, the Lean Essentials Series can be blended with the classroom based course; the Lean Workshop, offered by our parent company PMI. To understand how you can blend the Lean Essentials Series and the Lean Workshop effectively or to discuss your development further, give us a call.

Why essential.genius?

We offer you a full service solution including off the shelf or bespoke e-Learning products. We can provide you with pretty much everything - from user support to the messages you want to communicate to help you get the most out of your investment and ensure that you get the right training programme for your organisation. If you'd like to know how effective this could be, feel free to give us a call now.

Hey Presto! Discover how Lean process excellence helps our fictitious pizza company to make more dough.

1 Presto Pizza is a restaurant at risk of losing its hard-earned reputation because of inefficiencies in its business processes.

2 By looking at customer feedback, Carlotta and Luigi realise they are disappointing customers by repeatedly running out of their Seafood Special pizza.

3 The Group Accountant has also informed Carlotta and Luigi that the amount of ingredients the restaurant wastes over six months is equivalent to the annual wage of a chef.

4 A project team is established from within the business to assess current processes and identify areas where efficiency can be improved.

5 By removing waste and adding value in line with the Lean methodology, Presto Pizza can become a more efficient and successful business.

Think you can do better?
Try our 5S challenge now!

The e-Learning modules will take you through the entire process:

- Understand customer value
- Clean and map the process
- Streamline the process
- Understand customer demand
- Measure the process
- Identify sources of waste
- Create a smooth and even flow
- Balance the work
- Test and implement change
- Lock-in improvement
